# Chapter 1

## Class Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Object . . . . .	<a href="#">7</a>
Array . . . . .	<a href="#">5</a>
String . . . . .	<a href="#">8</a>

# Chapter 2

## Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">Array</a>	.....	<a href="#">5</a>
<a href="#">Object</a>	.....	<a href="#">7</a>
<a href="#">String</a>	.....	<a href="#">8</a>

# Chapter 3

## Class Documentation

### 3.1 Array Class Reference

Inheritance diagram for Array:

#### Public Member Functions

- **\_\_construct** (\$array=null)
- **clear** ()
- **clone** ()
- **convertAll** ()
- **copy** ()
- **exists** (\$predicate)
- **find** (\$predicate)
- **findAll** (\$predicate)
- **findIndex** (\$predicate)
- **findLast** (\$predicate)
- **findLastIndex** (\$predicate)
- **forEach** (\$action)
- **indexOf** (\$item)
- **lastIndexOf** (\$item)
- **reverse** ()
- **sort** (\$sortFunc)
- **count** ()
- **add** (\$item)
- **contains** (\$item)
- **insert** (\$index, \$item)
- **remove** (\$item)
- **removeAt** (\$index)

- **all** (\$predicate)
- **any** (\$predicate)
- **concat** (\$array)
- **distinct** ()
- **except** (\$array)
- **first** (\$predicate=null)
- **last** (\$predicate=null)
- **intersect** (\$array)
- **single** (\$predicate=null)
- **skip** (\$count)
- **take** (\$count)

The documentation for this class was generated from the following file:

- Array.php

## 3.2 Object Class Reference

Inheritance diagram for Object:

### Public Member Functions

- `toString ()`
- `__toString ()`

The documentation for this class was generated from the following file:

- `Object.php`

## 3.3 String Class Reference

Inheritance diagram for String:

### Public Member Functions

- **\_\_construct** (\$str=null)
- [indexOf](#) (\$str, \$offset=0)
- [indexOfAny](#) (\$chars, \$offset=0)
- [lastIndexOf](#) (\$str, \$offset=0)
- [lastIndexOfAny](#) (\$chars, \$offset=0)
- [bytes](#) ()
- [pad](#) (\$len, \$ch= ' ')
- [padLeft](#) (\$len, \$ch= ' ')
- [padRight](#) (\$len, \$ch= ' ')
- [trim](#) ()
- [trimEnd](#) ()
- [trimStart](#) ()
- [replace](#) (\$search, \$replace)
- **remove** (\$offset, \$len=null)
- [contains](#) (\$str)
- [endsWith](#) (\$str)
- [startsWith](#) (\$str)
- **format** (\$format)
- [lower](#) ()
- [upper](#) ()
- [len](#) ()
- [rev](#) ()
- [sub](#) (\$offset, \$length=null)
- **split** (\$pattern, \$limit=-1)
- [insert](#) (\$offset, \$str)
- [toArray](#) (\$offset=0, \$len=null)
- [toString](#) ()
- **offsetSet** (\$offset, \$value)
- **offsetGet** (\$offset)
- **offsetExists** (\$offset)
- **offsetUnset** (\$offset)

### 3.3.1 Member Function Documentation

#### 3.3.1.1 `String::bytes ()`

Gets the number of bytes the string takes

##### Returns

The number of bytes the string takes

#### 3.3.1.2 `String::contains ($ str)`

Checks whether the [String](#) contains the given string

##### Parameters

*str* The string to look for

##### Returns

A boolean to indicate whether the string exists

#### 3.3.1.3 `String::endsWith ($ str)`

Checks whether the [String](#) ends with the given string

##### Parameters

*str* The string it should end with

##### Returns

A boolean to indicate whether the string ends with the given one

#### 3.3.1.4 `String::indexOf ($ str, $ offset = 0)`

Searches for the first occurrence of the string and returns the position

##### Parameters

*str* The string to find

*offset* A zero-based offset to start the search from

##### Returns

The zero-based position where the string was found or false if not found

### 3.3.1.5 String::indexOfAny (\$ *chars*, \$ *offset* = 0)

Searches for the first occurrence of any given character and returns the position

#### Parameters

*chars* The array of characters to find

*offset* A zero-based offset to start the search from

#### Returns

The zero-based position where a character was found or false if not found

### 3.3.1.6 String::insert (\$ *offset*, \$ *str*)

Inserts the given string at the given offset

#### Parameters

*offset* The offset where to insert the string

*str* The string to insert

### 3.3.1.7 String::lastIndexOf (\$ *str*, \$ *offset* = 0)

Searches for the last occurrence of the string and returns the position

#### Parameters

*str* The string to find

*offset* A zero-based offset to start the search from TODO

#### Returns

The zero-based position where the string was found or false if not found

### 3.3.1.8 String::lastIndexOfAny (\$ *chars*, \$ *offset* = 0)

Searches for the last occurrence of any given character and return the position

#### Parameters

*chars*

*offset* A zero-based offset to start the search from

#### Returns

The zero-based position where a character was found or false if not found

#### 3.3.1.9 String::len ()

Determines the number of characters contained in the [String](#)

##### Returns

The number of characters

#### 3.3.1.10 String::lower ()

Creates a new [String](#) version with lowercase characters

##### Returns

The new lowercase [String](#)

#### 3.3.1.11 String::pad (\$ len, \$ ch = ' ' )

Creates a new [String](#) with equal padding to the left and right, if the padding is odd the right padding is bigger

##### Parameters

*len* The total target length, string and padding

*ch* The padding character or string

##### Returns

A new [String](#) containing the old string and the padding

#### 3.3.1.12 String::padLeft (\$ len, \$ ch = ' ' )

Creates a new [String](#) with padding to the left

##### Parameters

*len* The total target length, string and padding

*ch* The padding character or string

##### Returns

A new [String](#) containing the old string and the padding

#### 3.3.1.13 String::padRight (\$ len, \$ ch = ' ' )

Creates a new [String](#) with padding to the right

##### Parameters

*len* The total target length, string and padding

*ch* The padding character or string

##### Returns

A new [String](#) containing the old string and the padding

#### 3.3.1.14 **String::replace** (*\$ search*, *\$ replace*)

Replaces the search string with the replacement string

##### Parameters

*search* The string to replace

*replace* The replacement string

##### Returns

A new [String](#) with the replaced content

#### 3.3.1.15 **String::rev** ()

Creates a new reversed version of the [String](#)

##### Returns

The new reversed [String](#)

#### 3.3.1.16 **String::startsWith** (*\$ str*)

Checks whether the [String](#) starts with the given string

##### Parameters

*str* The string it should start with

##### Returns

A boolean to indicate whether the string starts with the given one

#### 3.3.1.17 **String::sub** (*\$ offset*, *\$ length = null*)

Creates a copy of a portion of the [String](#)

##### Parameters

*offset* The zero-based start position

*length* The length of the portion

##### Returns

A new [String](#) containing only the portion of the [String](#)

#### 3.3.1.18 **String::toArray** (*\$ offset = 0*, *\$ len = null*)

Creates an array of the characters of the string

**Parameters**

*offset* The offset where to begin

*len* The max length of the array

**Returns**

An array of the characters of the [String](#)

**3.3.1.19 String::toString ()**

Returns the plain string

**Returns**

The plain string

Reimplemented from [Object](#).

**3.3.1.20 String::trim ()**

Creates a new trimmed [String](#) without leading or following whitespaces

**Returns**

A new trimmed [String](#)

**3.3.1.21 String::trimEnd ()**

Creates a new trimmed [String](#) without following whitespaces

**Returns**

A new trimmed [String](#)

**3.3.1.22 String::trimStart ()**

Creates a new trimmed [String](#) without leading whitespaces

**Returns**

A new trimmed [String](#)

**3.3.1.23 String::upper ()**

Creates a new [String](#) version with uppercase characters

**Returns**

The new uppercase [String](#)

The documentation for this class was generated from the following file:

- [String.php](#)
